# SNAP *Earth Observation Made Easy*

## SNAP is

the open-source toolbox to analyse and process Earth Observation data

focus on Sentinels 1, 2 and 3

open source

scalable to run on notebooks up to large production clusters

cross-cutting tool within the FutureEO programme to support users, projects and applications

## SNAP user base and uptake

Over 1 million downloads

Over 10 000 registered forum users

## SNAP Roadmap 2023 - 2024

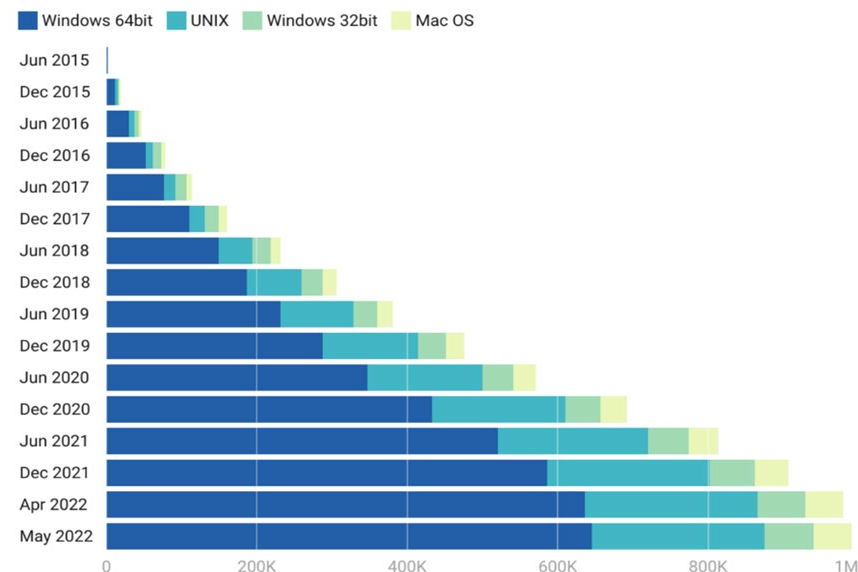

06 / 2023: Introduce **Optical** and **Microwave Toolboxes** & large software renovation – **making it technologically future proof**

12 / 2023: Support to **new ESA missions**, preparing for hyperspectral CHIME and microwave CIMR

06 / 2024: **Change detection** Toolbox

12 / 2024: Support NISAR, BIOMASS, **time series** tools

## SNAP cumulative downloads

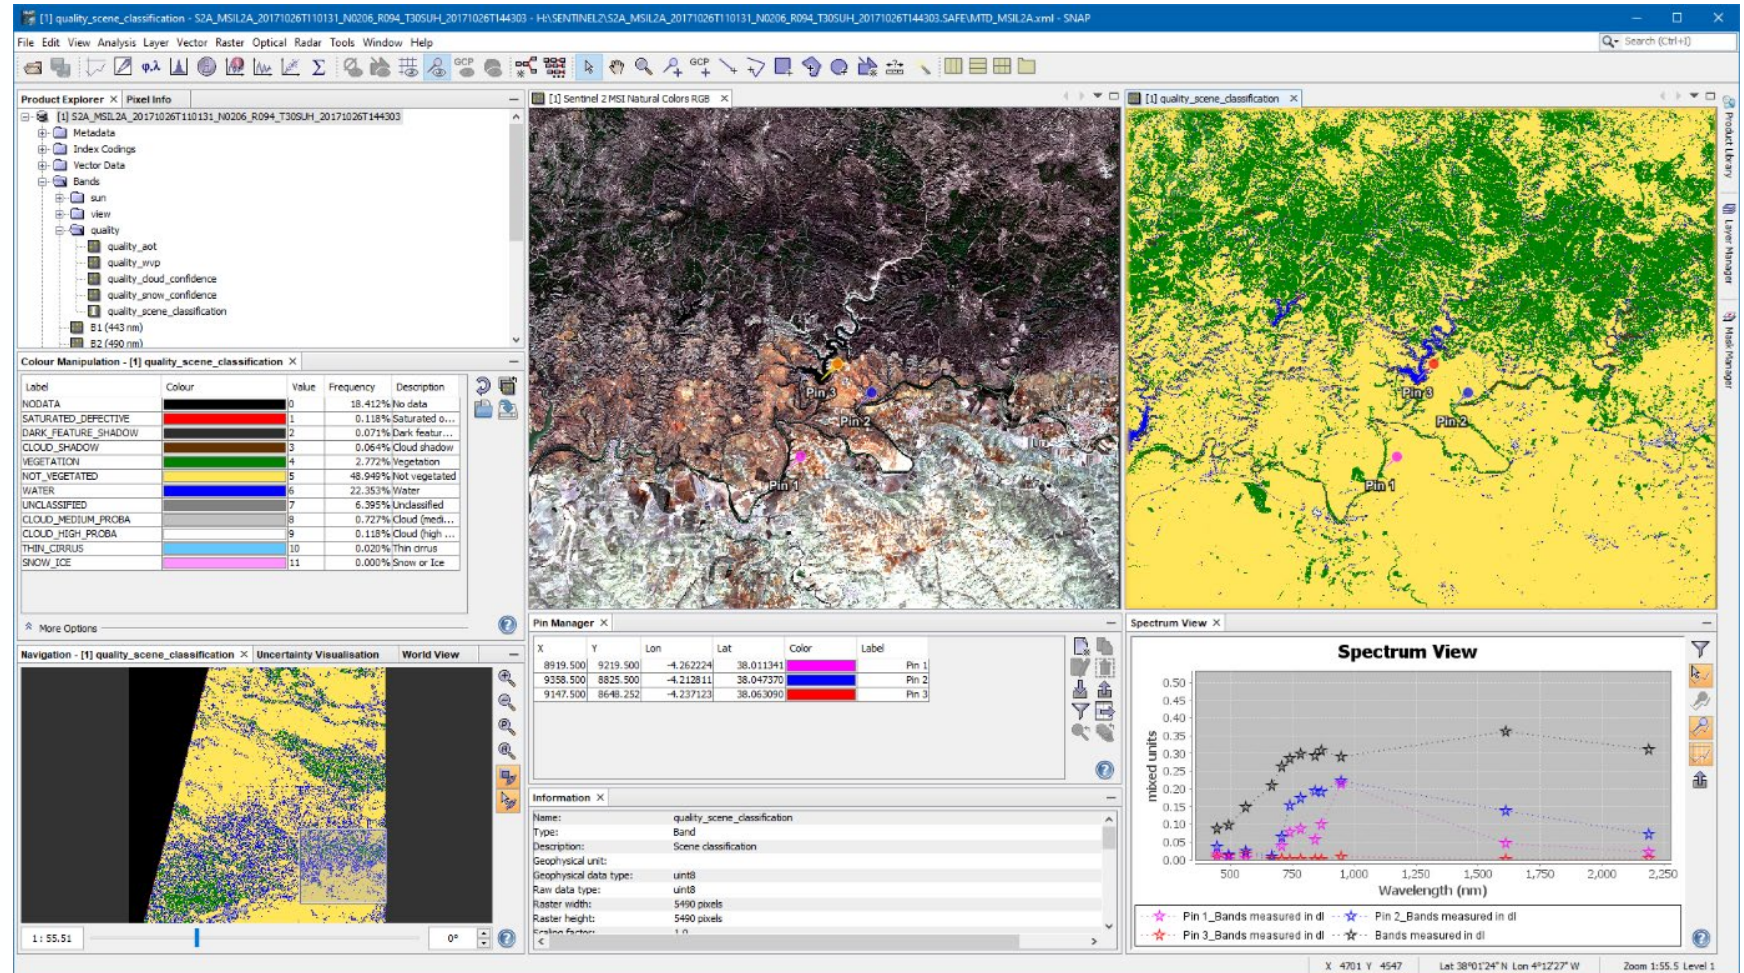

# The Development Team

**SNAP Desktop** is the GUI application which allows access to a large number of EO and generic raster data.

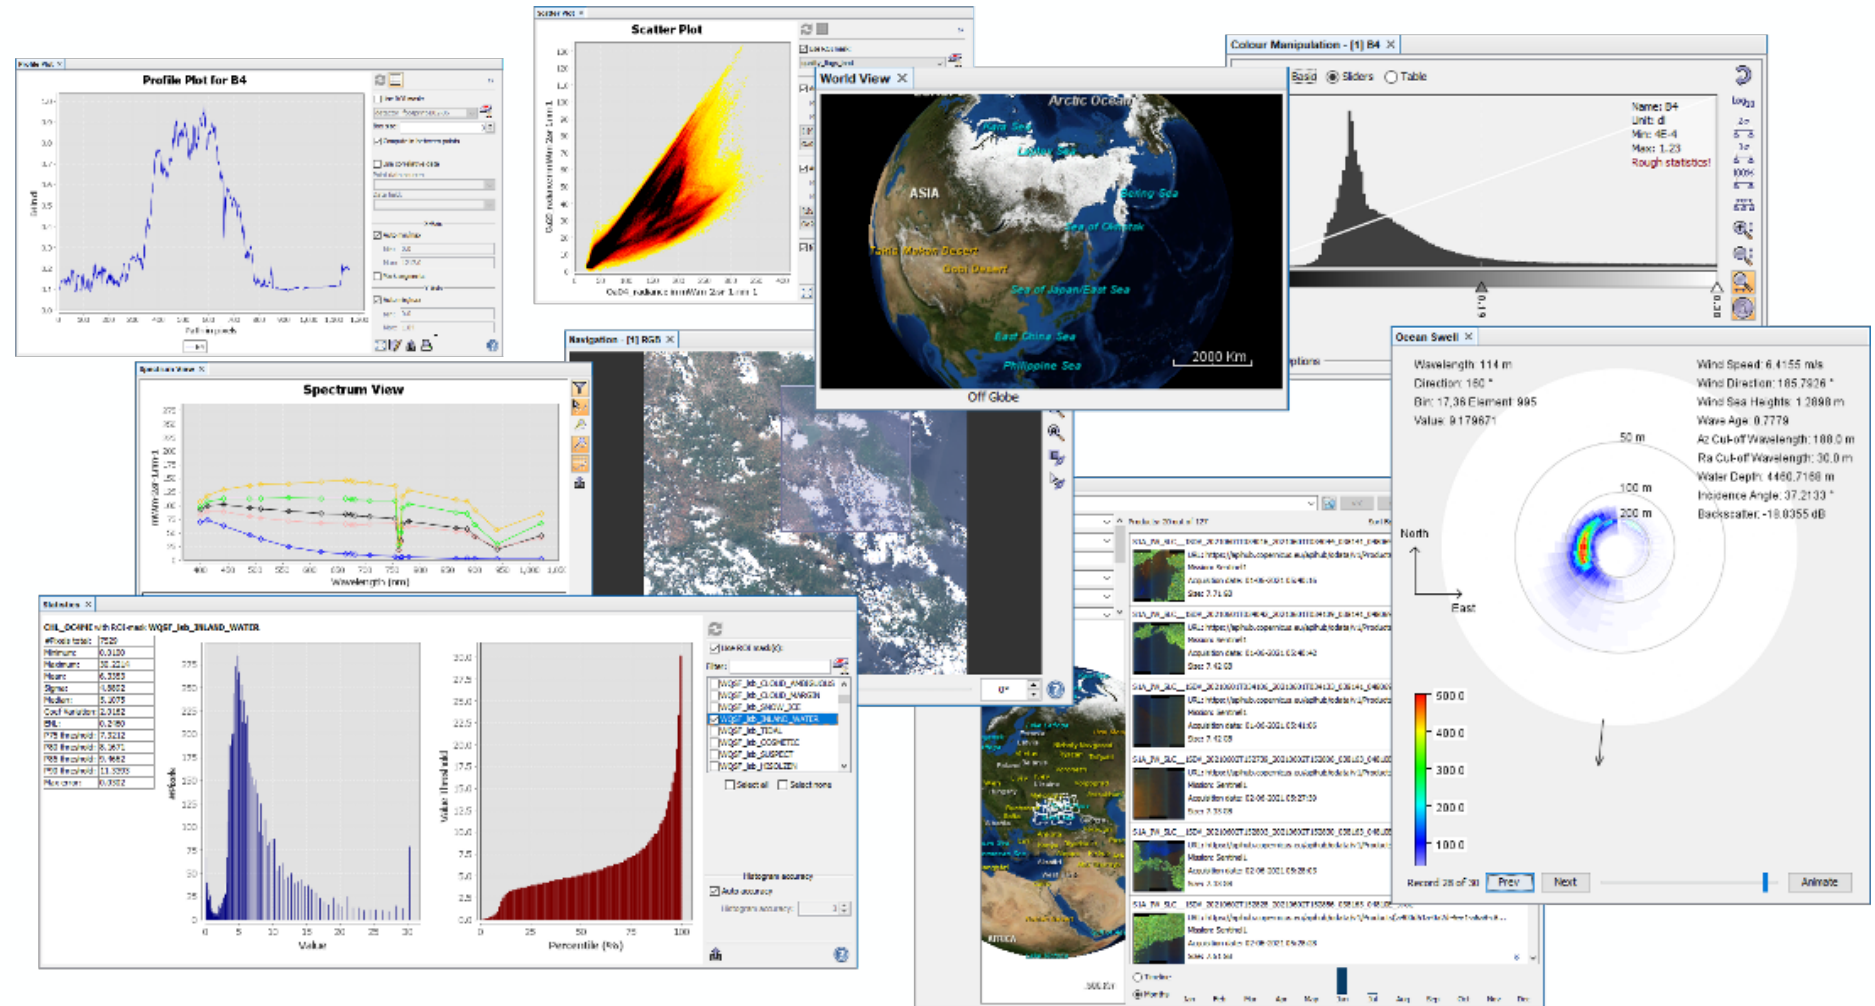

It provides various tools to display the data, and to visually analyse them.

The figure on the right shows an RGB of a Sentinel 2 product (centre) together with a visualisation of the scene classification layer (right panel). Bottom right show the spectral plots at places marked by PINs.

**SNAP** provides a rich suite of tools for data analysis, including profile and spectrum plots, statistical analysis, extraction of points through time series, and comparison with reference data (match-ups).

The figure shows some of the graphical analysis tools included in SNAP.

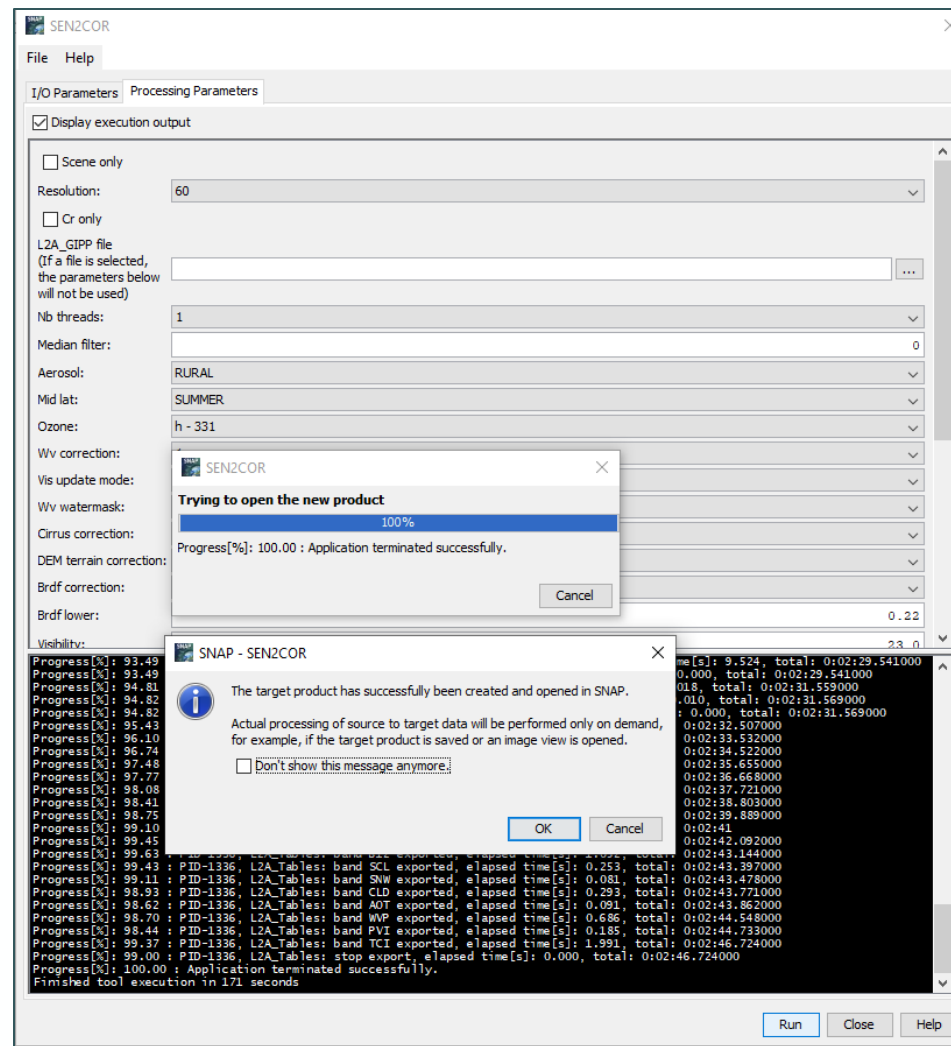

**SNAP Data Processors** analyse one or more input products and generate a new output product.

Processors exist for generic operations such as band arithmetic, map projection or temporal aggregation.

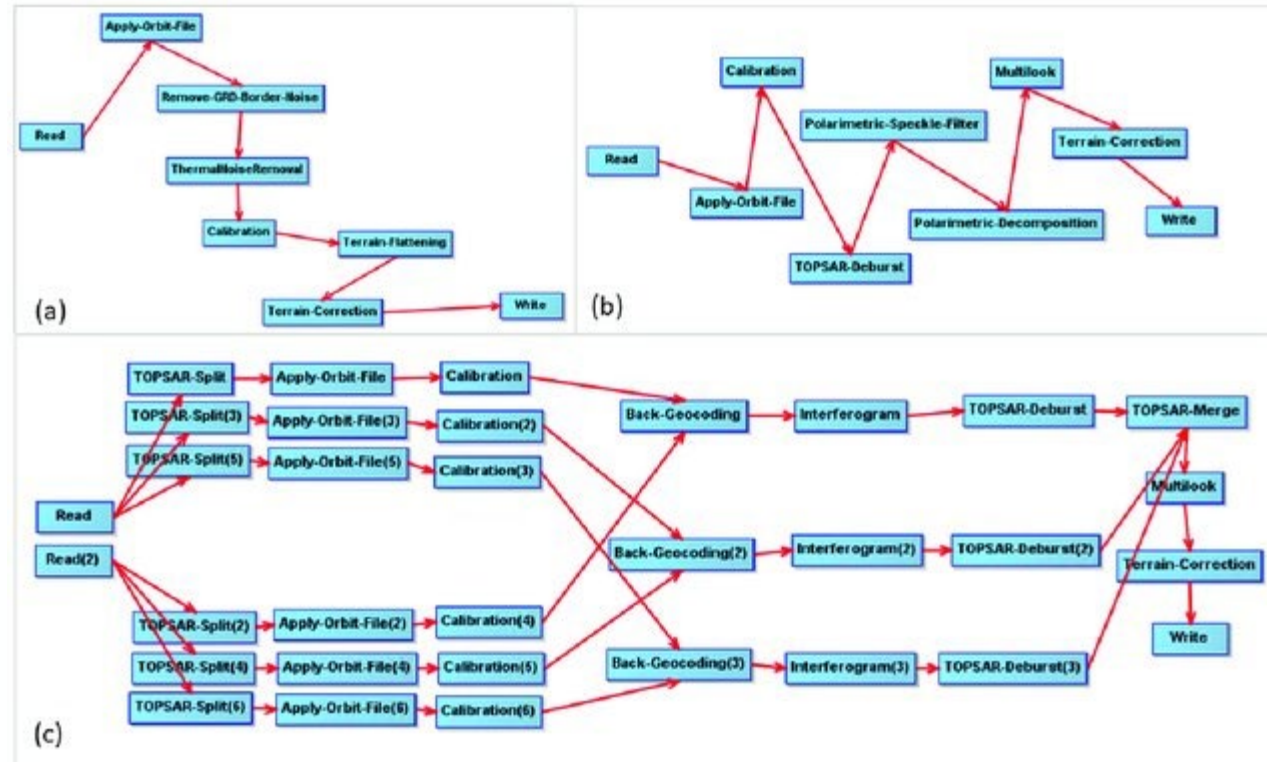

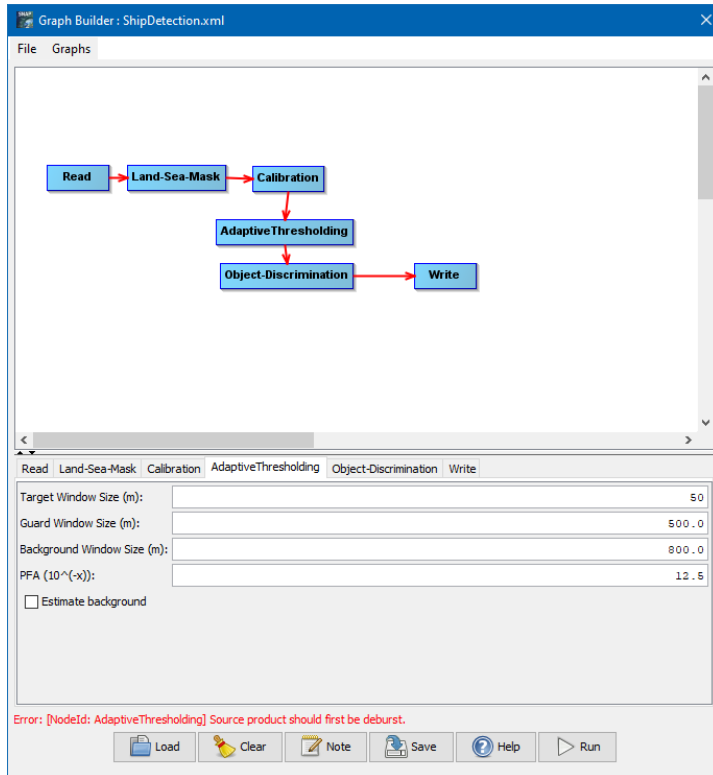

SNAP provides a very large number of thematic processors, e.g. for atmospheric correction, biophysical indices calculation or retrieval of water quality.

SNAP supports special calibration of correction of satellite instruments with dedicated processors.

The figure shows the GUI for the Sentinel-2 Atmospheric Correction Processor `sen2cor`. The screenshot was taken when the processor was successfully executed. The black background shows the logging information during execution of the processor.

# Graph Building and Batch Processing

The **SNAP graph builder** allows to connect **SNAP operators** in **processing graphs**. These can be executed locally or in large clusters and cloud systems.

*Example: Workflows in the SNAP graph builder tool for producing Synthetic Aperture Radar (SAR) analysis ready data (ARD) products . From Ticehurst , et al (2019). Building a SAR -Enabled Data Cube Capability in Australia Using SAR Analysis Ready Data. Data. 4. 100. 10.3390/data4030100.*

Sentinel-2 second Normalized Difference Water Index (NDWI2) included in SNAP. In the NDWI2 product, it is easy to distinguish the aquaculture facilities in the Gulf of Gaeta (Lazio, Italy).

Sentinel-1 A featuring land coverage and use across Ireland.

SNAP processing:

- Stitching 16 scenes
- InSAR coherence (red)
- Avg. backscatter (green)
- Backscatter intensity difference (blue)

- Calibration
- Precise orbits
- Speckle Filtering
- Terrain Correction
- Terrain Flattening
- Ellipsoid Correction
- SAR Simulation
- Mosaicking
- Reprojection
- Multilooking
- Coregistration
  - Cross Correlation
  - DEM Assisted
  - TOPSAR
- Interferometry
- Differential Interferometry
- Phase filtering
- DEM/Displacement
- Automatic DEMs
- Integration with PolSARPro
- Integration with SNAPHU
- Integration with STAMPS
- Integration with PyRate
- Polarimetric Tools
- Thermal Noise Removal
- Slice Assembly
- TOPSAR Deburst and Merge
- Soil Moisture

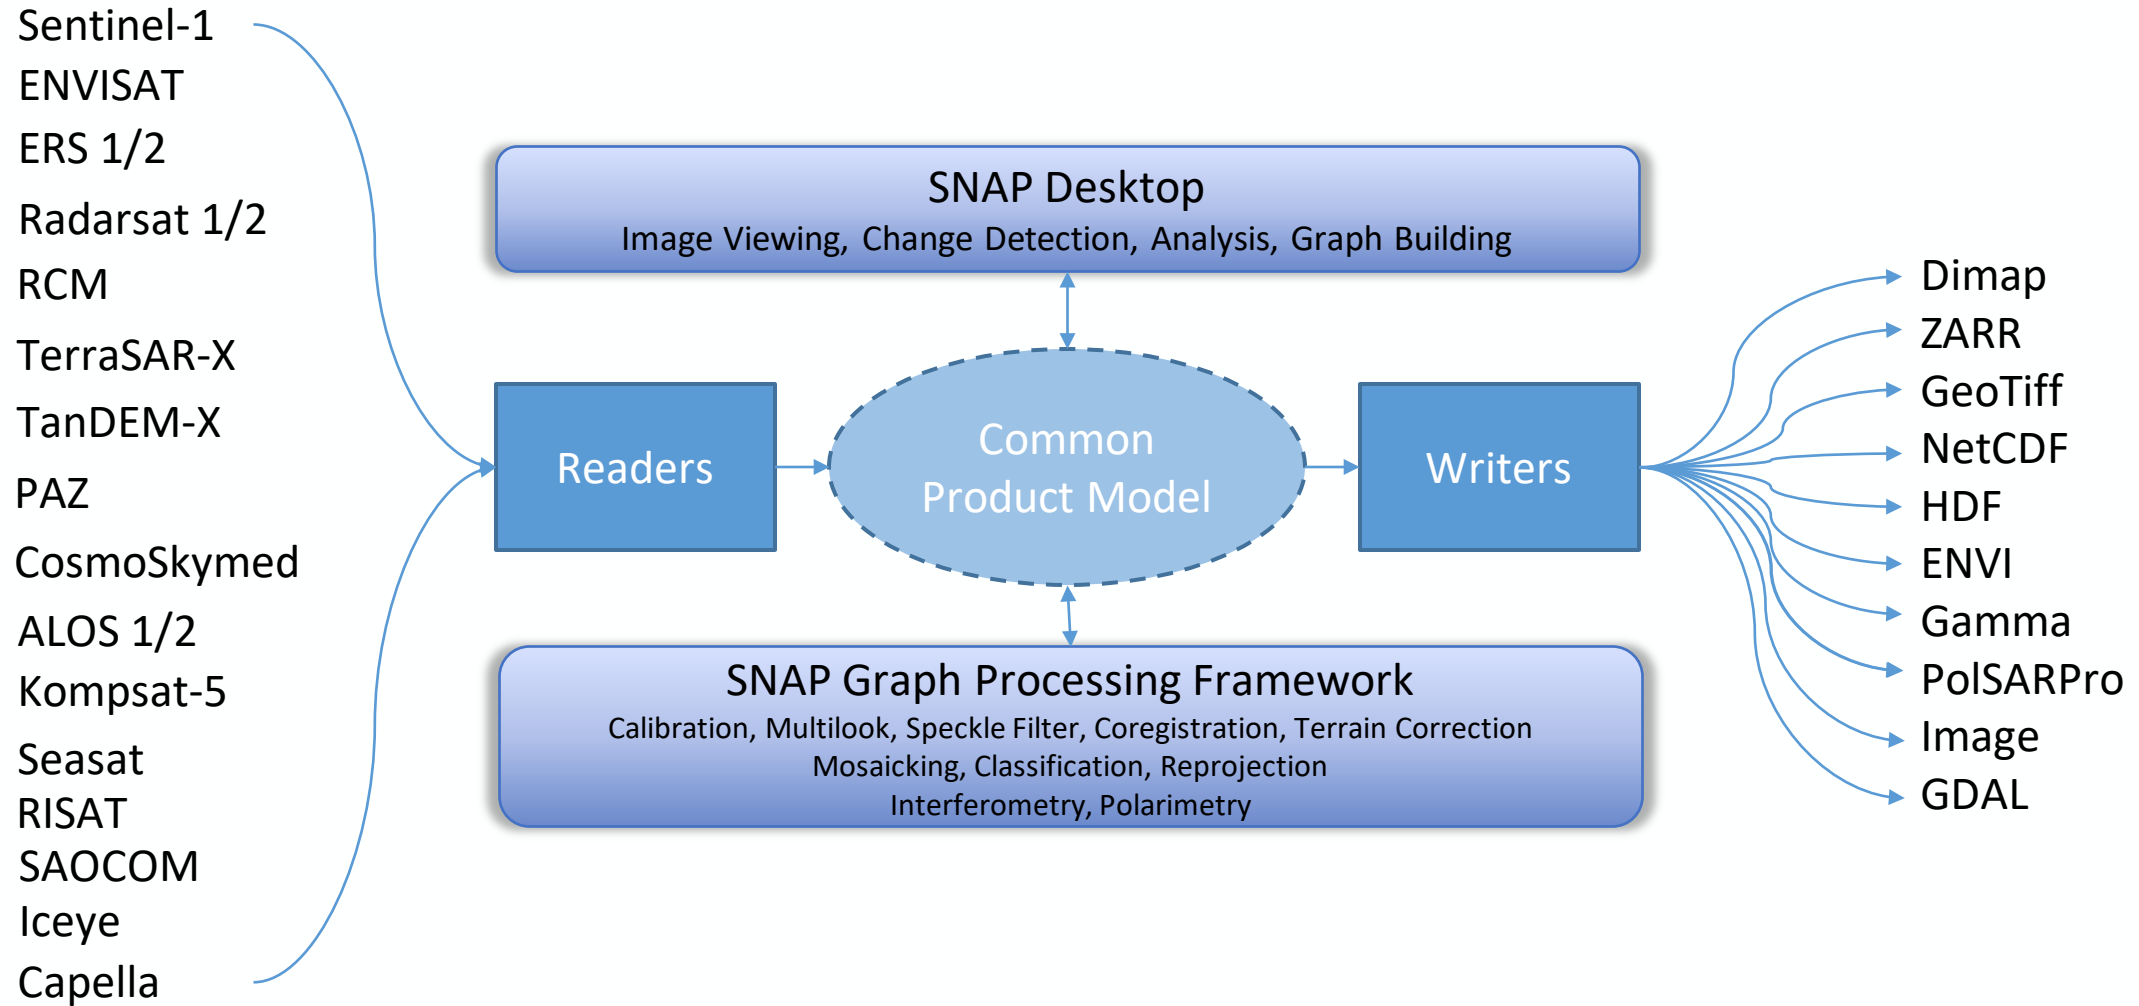

# Supported SAR Missions

- ALOS 1&2
- Capella
- Cosmo-Skymed NG \*
- ENVISAT
- ERS 1&2
- Gaofen-3
- Iceye
- Kompsat-5
- Paz
- NovaSAR
- Radarsat 1&2
- RCM
- Risat-1
- SAOCOM \*
- Seasat
- Sentinel-1
- Spacety \*
- StriX \*
- TerraSAR-X/TanDem-X
- UAVSAR

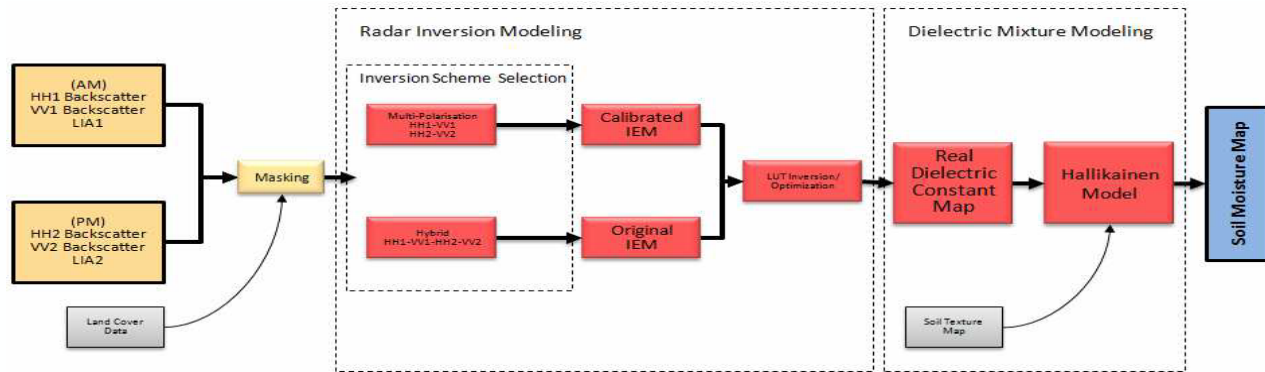

\* New or Updated Support

# Common Product Model

# Multitemporal Composite of RTC Images

# Spotlight Coregistration

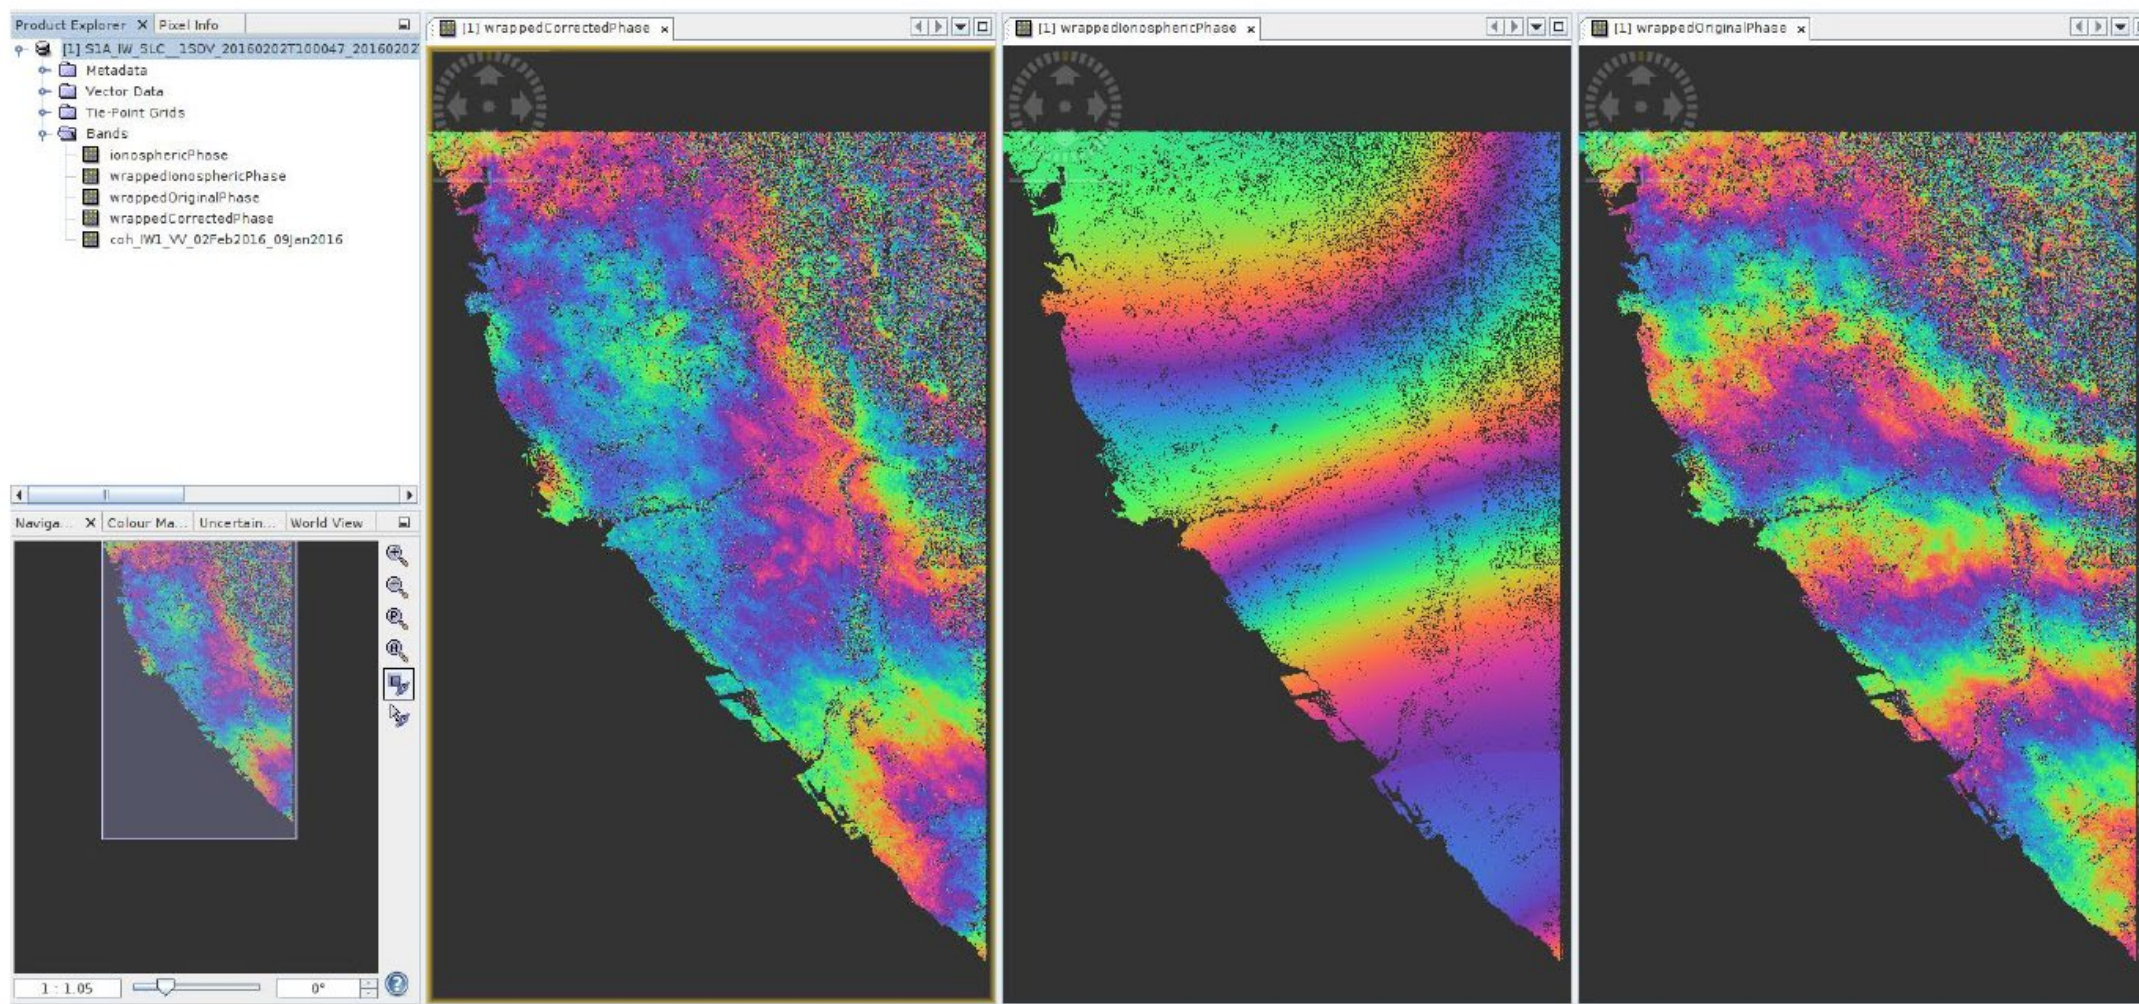

# Ionospheric Correction using a Split-bandwidth Approach

Corrected

Ionospheric phase

Original

PyRate is an open source InSAR tool that calculates surface velocity from a SBAS network of unwrapped interferograms

Created and maintained by GeoScience Australia

Integration Improvements:

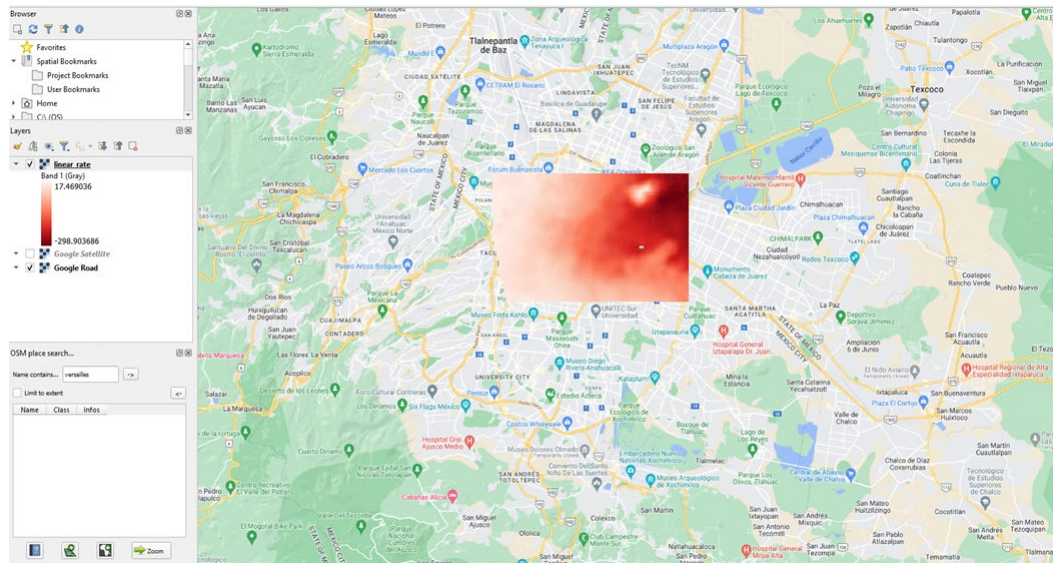

- SNAPHU Export now produces SNAPHU conf files for each interferogram in a multi-reference SBAS interferogram stack
- Batch SNAPHU Unwrap operator will batch unwrap all wrapped phase interferograms using SNAPHU, and assemble them back together into a single stack within SNAP
- Improved PyRate writer with additional data validation checks have been put in place in the PyRate writer.

# PyRate Orchestration Script

The included tutorial on SNAP <=> PyRate now includes an orchestration script

A BASH script as well as a Batch script is provided so it can run on both Windows and UNIX systems

Provide a folder of Sentinel-1 images, specify subsetting commands, and it will process your data automatically

```
# Apply orbital file correction and split into subswath & burst range.
for a in input/*.zip; do \
  aOut=$(echo "$a" | sed 's/input/intermediateProcessing/0/g')
  gpt "00_0rb_Split.xml" -PsourceProduct="$a" -Pswath="$sentinel1_sw

# Create a file listing for all the files created in the previous step
file_list=""

# Loop through the files in the directory ending with .dim
for file in intermediateProcessing/0/*.dim; do
  # Check if the file exists and is a regular file
  if [ -f "$file" ]; then
    # Concatenate the file name to the list, delimited by semi-colon
    file_list+="$file;"
  fi
done

# Remove the leading semi-colon (if any) from the file list
file_list=${file_list%;}

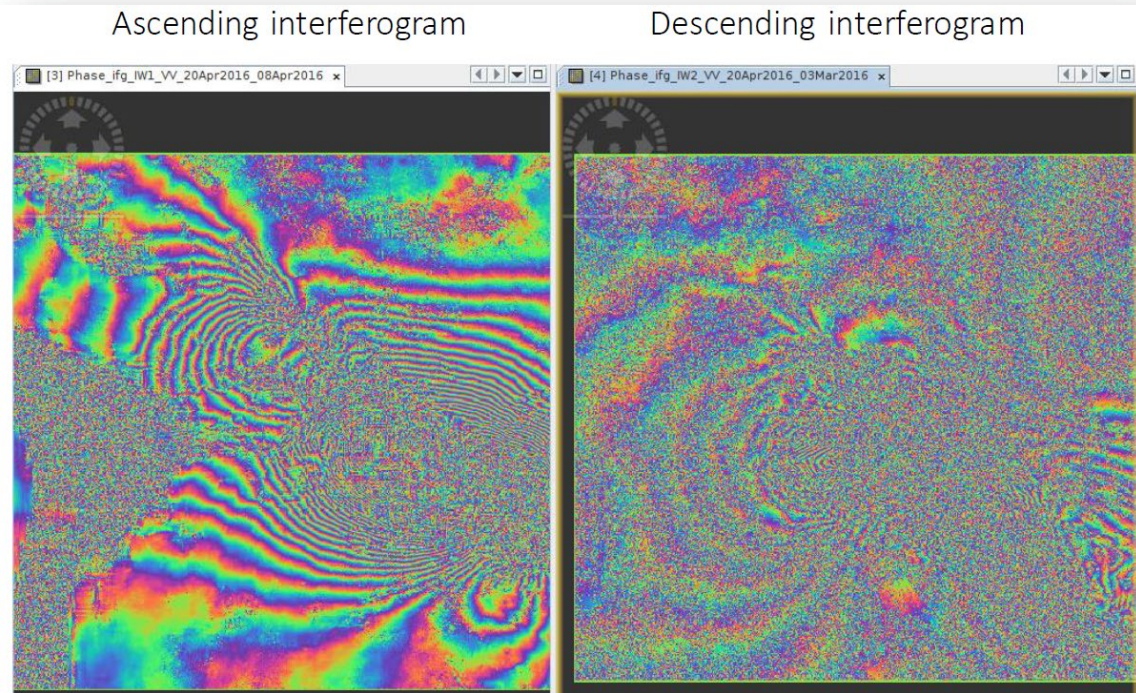

# Perform stack creation
gpt "01_Create_Stack.xml" -PinputFileList="$file_list" -PoutputFile="$

delete_folder $intermediate_processing_location/0

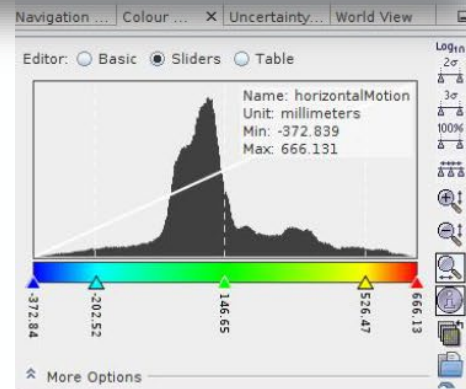

# Perform SNAPHU export preparation and interferogram generation
gpt "02_00_Create_Interferograms.xml" -PinputProduct="$intermediate_pr

# Clear out image stack
delete_folder intermediateProcessing/1
```

# Retrieval of Vertical and E-W Motion Components

Horizontal/vertical motion

- Refactoring from S1TBX to Microwave Toolbox
- Support for updated Sentinel-1 COG format
- Support for Cosmo Skymed Second Generation
- Updated support for ALOS-2
- Updated support for SAOCOM
- ETAD Reading and Visualization
- ETAD GRD and SM SLC Correction

- ETAD Corrected SLC/GRD
- ETAD Improved Coregistration
- Model based Decompositions of Dual Pol SLC
- SpatioTemporal Asset Catalog (STAC)
- New Classification Algorithms
